1-4. SAFETY PRECAUTIONS

Following messages are safety reminders on how to protect your systems from damages. And thus, helps you lengthen the life cycle of the system.

1. Check the Line Voltage

- a. The operating voltage for the power supply should cover the range of 100VAC-240V AC, otherwise the system may be damaged.

2. Environmental Conditions

- a. Avoid extremely hot or cold places to install MP-1060.
- b. Avoid exposure to sunlight for a long period of time (for example in a closed car in summer time. Also avoid the system from any heating device.). Or do not use MP-1060 when it's been left outdoors in a cold winter day.
- c. Bear in mind that the operating ambient temperature is from 5°C up to +35°C.
- d. Avoid moving the system rapidly from a hot place to a cold place or vice versa because condensation may come from inside of the system.
- e. Place MP-1060 against strong vibrations, which may cause hard disk failure.
- f. Do not place the system too close to any radioactive device. Radio-active device may cause interference.

3. Good Care

- a. When the outside of the case is stained, remove the stain with neutral washing agent with a dry cloth.
- b. Never use strong agents such as benzene and thinner to clean the system.
- c. If heavy stains are present, moisten a cloth with diluted neutral washing agent or with alcohol and then wipe thoroughly with a dry cloth.
- d. If dust has been accumulated on the outside, remove it by using a special made vacuum cleaner for computers.

3-4 Adjusting the Paper-near-end sensor

Since roll paper cores vary slightly in shape, depending on paper roll design and manufacturing tolerances, it impossible to detect the remaining paper exactly.

Use roll paper with a core inner diameter of 12 mm and outer diameter of 18 mm, so the paper detector can detect the remaining paper as accurately as possible.

Follow the procedure below to adjust the roll paper detector position.

1. Open the roll paper cover, and remove the roll paper.
2. Bend the adjustment lever to reposition paper sensor. Adjustment positions are as follows:

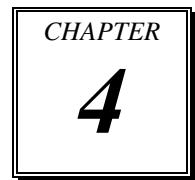

3. After adjustment, load the roll paper.
4. Close the roll paper cover.

Command classification

Executing : Printer executes the command, which does not then affect the following data.

Setting : Printer uses flags to make settings, and those settings affect the following data.

○: Enabled.

◎: Enabled only when the command is set at the beginning of a line.

●: Enabled only when data is not present in the printer buffer.

▲: Only value setting is possible.

Disabled: Parameters are processed as printable data.

Ignored: All command codes including parameters are ignored and nothing is executed.
